

## Industry vertical: Telco

---

**Technology:** Web platform (J2EE, SOAP, AJAX)

---

**Industry:** Telco

---

**Infuse Technology:** HP LoadRunner, HP BAC, Grinder

---

**Infuse Services:** Performance Engineering

---

**Infuse Solutions:**

---

### Objectives

- To execute a managed performance testing service for major Web platform (J2EE, SOAP, AJAX)
- To provide consultants with skills in LoadRunner, and Grinder
- Contain costs by working to fixed price phases for scoping, scripting and execution
- Provide core team with rapid ramp up/ramp down of consultants

### Approach

- Infuse for Performance Engineering
- Create reusable script packs and framework
- Performance test every release in an agile delivery
- Collaborate with development and operations
- Ramp up/Ramp down of core team on average at 3 weeks

### Results

- Fixed price regression testing for performance, executed by core team
  - Quality of releases improved
  - No issues with performance on platform since service started
  - Ongoing regression testing of each new release of software
  - Performance test model adjusted per release after input from Operations data (BAC) to test live scenarios
-
